

## INTERACT Software

### Application specific tool palette

Annotation palette shown when annotating over windows applications

Interact by Luidia – the client software that is the result of years of experience in the IT market, months of research on computer interfaces, and a whole lot of creativity. The one-of-a-kind circular tool palettes provide quick access to the central features of the software and will tailor themselves to whatever application you are working on. They can be controlled by the touch of the screen, so no matter where you may be drawing on your large screen display, the Interact palettes are always right where you need them. This unparalleled flexibility means that your audience will be focused on what you're writing, not on what you're reaching for.

Scrapbook Palette

**Import, create edit and save content**

Desktop Palette

**The 'hub' of the Interact software**

PowerPoint® Palette

**Annotate and navigate your slide presentation**

Import Word, Excel, and PowerPoint files. Add jpegs and bitmaps as background images. Mix handwritten notes with text boxes or image objects. Take a screen shot of your whole screen or just a snapshot of particular portion. Whatever you bring into Scrapbook can be shared live over the Internet in real-time or saved in one of 10 popular formats – even PowerPoint!

Interact software features a PowerPoint specific toolbar that allows you to navigate your existing slide shows with ease and annotate them on the fly. Use the page icons on the wheel palette to move back and forth effortlessly through your presentation while standing in front of your audience, not while stuck behind a computer screen. The palette also offers pen and highlighter tools along with shapes and arrows that you can add to your slides and then save back to the .PPT file. The Interact PowerPoint toolbar is a great way to add new life to your tried and true presentations.

### Feature Highlights

Share Meetings or your classroom.

Input text with hand writing recognition.

INTERACT works with any U-Touch screen overlay

Import and share PowerPoint files in a few clicks.

Annotate directly on the screen, and over any application.

Browse and import clipart from the Gallery.

Import and manipulate image objects.

Use full-screen view to create an unobstructed, giant whiteboard space.

Save Scrapbook files as PDF, PowerPoint, HTML, and most image formats.
